SUMMARY

Intermediate Software Developer with close to three years' experience in the industry. I am a technology enthusiast and one of my core beliefs and reason I am passionate about technology is because of the endless possibilities it provides to enrich life.

Amongst other skills I am a goal driven individual who is disciplined enough to see things through, despite any obstacles. I work well with others and enjoy being part of a team.

Responsibilities and Completed Projects:

Project Name: Sasol K2

Project Description:

Working with a team of six to provide support on K2 Applications owned by Sasol. The responsibilities of this project involved are as follows: K2 Development, Management of K2 Environments (Development, Quality Assurance, Production), Debugging processes in an Error State, Deployment of K2 Applications from Dev to QA and to Production. Ensuring that important product documentation is up to date.

Project Name: BritePlanSupport

Project Description:

Working on the First Digital Internal system, which involved updating the user interface, developing new functionality, and making sure that the correct data is being pulled and displayed from the back end to the front. This project involved technologies such as Angular, MVC and Microsoft SQL

Project Name: Nintex Connector Development

Project Description:

Nintex training at the beginning of the project which led to custom connectors being developed in Json Format and tested using the Nintex workflow environment. The Connector Testing was completed in various testing environments, to ensure that it was working correctly. After the completion of every connector, it was a necessity to complete the connector documentation, detailing all the functionality as well as expected inputs and outputs.

Project Name: GSK

Project Description:

Doing custom development on an MVC web application. This included making user interface changes that met with the client requirements. Making changes to the SQL database to ensure that the correct data is being pulled to the front end from the back end

Project Name: Call Control Rewrite Build

Project Description:

Doing custom development on an Angular application. This included making user interface changes according to the client requirements. Implementing the use of a WYSIWIG and making sure user authentication was being processed correctly.

Project Name: First Distribution Cloud CRM

Project Description:

Customizing Dynamics 365 Sales Professional Environment to meet the business needs for First Distribution. That includes creating different views to display only specified information. Customizing Core Entities: Creating forms and fields for information recording. Assigning Roles to different users as well as configuring what specified roles have access to. Doing demos of different Dynamics 365 modules for webinars.
